

Position Postdoc

We are seeking a post-doc in experimental solid-state materials science/physics/chemistry to work on multiferroic materials. Activities will include synthesis, structure determination, and investigation of physical properties.

Using the facilities of the newly established ULTRACOOOL Materials Science Laboratory (<http://www-k5.ijs.si/sistem-za-nanaskanje-trdnih-delcev-v-curku-aerosola/>; <http://www-k5.ijs.si/oprema/ultracool-laboratorij-financiran-iz-direktorjevega-sklada-2017/>), we will investigate the possibility of producing multiferroic composites.

The work will take place in the Laboratory of Electronic Ceramics, K5 (<http://www-k5.ijs.si/en/>), of the Jožef Stefan Institute, Slovenia, under the direction of Prof. Hana Uršič Nemevšek (<https://scholar.google.com/citations?user=ljc7xS4AAAAJ&hl>).

Collaboration with national and international research groups is an essential part of the research.

If you have completed the PhD program and are interested in working at the Jožef Stefan Institute, please contact me at hana.ursic@ijs.si.
